Hello,

I received some great advice from you and currently have a frequently updated anti virus software (PC-cillin) on my computer and also a physical (hardware) firewall (Alpha Shield). Additionally, I regularly run Ad-aware (always updated) and CWshredder. All is almost 100% good but I still get porn popups on startup, many popups. Can someone pleeeeee help me with this ? Damn, since I upgraded from Win98 to WinXP, the amount of problems with viruses, hackers, ads, popups have been severe.

Thank you again,

Daniel
