Hi

Try these programs to check for any spyware that may be on your system:

Ad-Aware – www.lavasoftusa.com

Spybot – <http://www.safer-networking.org/>

CWShredder – <http://www.spywareinfo.com/~merijn/downloads.html>

Try SpyWareBlaster to stop intrusions:

| My homepage keeps changing to "about blank" then to some
| search page. I have removed virtual machine and got rid
| of all traces in the regedit. I have used "Pestpatrol"
| and "Spyware" I have also tried a program
| called "Shredder" which does find a few things and fixes
| the problem but it keeps going back to about blank after
| a little while.
| What else can I try?
