Bought new computer with Windows XP home ed. Loaded the old Microsoft Publisher version 2 that I had been using on my old computer. It is pretty old, the box says 1993. It loaded up and ran just fine and all the old files were readable. But after I installed a new Hp 2175 all-in-one printer, and tried printing a Publisher file, I got an error message as follows: File Error > Cannot find WINPRINT.DRV. Consequently I cannot print any Publisher files. Can anyone help? Printer works OK with files other than ".pub"
