I have followed the explanation in the help of Microsoft xp home edition to associate a file.

When I choose the program that I wish to associate with the file as described here:

"Windows displays a dialog box that displays programs that are installed on the computer. If the program that you want to use for this file type is not listed, click Browse to locate the appropriate software. Select the Always use the selected program to open this kind of file check box."

The "Always use the selected program to open this kind of file check box." remains grayed out,can not check this box.

Am i doing something wrong? Thanks
