Hi all,

I have a Win2K Advanced Server + SP4 with AD installed and a XP Pro client + SP1a.

My Win2K is a domain controller while my XP is just a standalone client without joining the domain.

I have the administrator ID with the same password in both PC and normally my XP can access the to the Win2K shared folder by using this mirror account. However I do not know why recently I cannot logon by this way. The Win2K server is logged with :

The logon to account: Administrator
by: MICROSOFT_AUTHENTICATION_PACKAGE_V1_0
from workstation: WINXPXW
failed. The error code was: 3221225578

and

Logon Failure:

Reason: Unknown user name or bad password

User Name: Administrator

Domain: WINXPXW

Logon Type: 3

Logon Process: NtLmSsp

Authentication Package: NTLM

Workstation Name: WINXPXW

If I logon from Win2K to the XP client, the result is the same. (But both administrator ID is OK and did not disabled)

I even try to configure the XP to join to the Win2K domain, but it requests for a Domain ID. No matter I give any valid powerful ID, it always scold with "Unknown user name or bad password", but I am sure all account password is correct...

microsoft.public.windowsxp.general: XP cannot access to Win2K Server

Anyone knows the reason? Thanks!

Karen
