I see that Rick's already answered you, but I thought I'd add my voice to his. Yes, you can install applications on any partition that's convenient for you. There's no reason to confine yourself to C:.

Note, however, that if you've already installed to C: it's not easy to *move* an application to another drive (it requires special software, and I've had mixed results trying such software). The best way to do that is to uninstall it, then reinstall it wherever you want it.
