Hi Tom:

If I use the recovery console will I be able to delete a windows file like Pagefile.sys ? Lots of time I end up with two of these on my computer but only one is the right one.

Or sometime I delete a program but it folder and some files are not deleted. Will I be able to delete them with the recovery console?

How about a index.dat file ? Somtime they get really big and I delete them and them WinXP will restore them to a small value.

Thanks a lot for the fast reply.

Ed
