ok sanjay i really feel with you and i've seen all the replay for youe problem and no one have solve it for you, here what you have to do so no program will load when you start your pc:

click on start>>run>> then type in msconfig>>>click ok.

they the system coonfiguration utility will load up.

if you want to eleminate all the programs that run when windows start up and you dont really need them all you have to do is click on (SELECTIVE STARTUP) and then uncheck the load startyo ITEMS and click on ok then your winodws will ask you to restart, and after that you will see a message saying you have you pc on selective start up check on dont show me this message again and enjoy the speen of your RAMSSSS.

another thing you can do if you know what you are doing, and because i dont know what kind of programs are loading when you start you pc i cant tell you what to uncheck, but i can tell you if you know what you will do and which programs you want to shutdown on the start of windows, here it is:

click on start >>>>run>>>type in msconfig>>then click ok

the system congif will load then go to startup tap and see which programs you want to load when your pc start and which not;you can uncheck the program that you want to turn off on the loading of your pc. then you can click ok and the same thing it will tell you windows need to restart , go ahead and restart then the same message will apper and it will tell you, you are on the selective or diagnostic startup and check dont show me this message again and enjoy your 500 RAMS AND MORE.

PS: if you dont know what you are doing just select the first option and you will be ok.

ta ta for now

jakob
