Nathan good to hear from you--

I wish I could accurately distinguish what are SP2 problems (particularly some of the ones that involve configuring the firewall to let them operate) and what are just my normal daily little hurdles to let me know just when I think I have things purring along well a glitch is just around the corner. I'm wrestling with why Perfect Disk won't associate all of a sudden with my box to run when it has run fine with SP2 before yesterday. It's just a pain to keep uninstalling or fixing programs from Add/Remove to see if they aren't working for reasons that aren't SP2.

One thing this has done is to make me check sites for updates I don't have that can come out so frequently.
