My virus scanner says I have a trojan horse in "c:\\windows\\av.exe" and it can't be fixed or quarantined; it can only be deleted. Before I delete it, can someone please tell me what is the av.exe file? Is it important? Is it OK to delete it? Will I destroy my computer if I delete it?

This is the first time I used the antivirus software, and I don't know what to do with the results :>)

Thanks for any information,

Mom
