I installed service pack 2 on my windows xp pro computer, and now my wallpaper is white. I am connected to a LAN with a windows 2000 server, pushing down group policies. The policy states that the wallpaper is "none" and the desktop has always been blue in color. now with sp2 installed the background is white (during boot up it flashes blue then switches to white). I do not want to force a picture on the desktops, I just want the blue color back. Is there any fix to this?
Thanks
