I was a Bets tester for SP2. I work for a large development consortium testing their custom applications with SP2. I am responsible for the operation of over 250 machines all running trouble free for 3 years Plus. I think I probably know a little more than you having worked on the development side. No I will not change my mind. I have SP2 on this one machine only as I still use it to test applications.

But thanks for your concern.

Testy
