My computer recently bit the dust, but I was able to salvage the Hard Drive. I have some files on the HD there were encrypted that I need to retrieve. I have tried installing the HD into a couple of other computers and been unable to boot with it. However, I can install it as a slave device. Does anyone have any idea how I would be able to recover these encrypted files in this situation. I now know that I needed to have some keys backed up but I didn't. But I think since the actual Hard Drive is unchanged I may still be able to recover the files. Any help that can be provided would be greatly appreciated. Thanks in advance.
