If this is the first time you are installing Service Pack 2, and this is a production machine, I'd go with installing SP1. If this is a test machine, then go with SP2. To answer your question, No, it is not necessary to install SP1. SP2 is the updated service pack which contains all changes in SP1 and more new features.

I hope this helps

Soraqa

|
|
| When re-installing Windows XP Pro, do I need to install Service Pack 1
| again before installing Service Pack 2, or does SP2 include all of the
| updates from SP1?

| Thanks in advance.
