Or, get third party CD burning software like Nero, which includes InCD (runs in the background), which treats a CD-RW like any other drive (save to, delete, copy, paste, etc.). I just used the MS MONEY File menu/Back Up/Back Up to Hard Disk option/Browse button/Save In: E:\ (my CDR/CD-RW drive, with a formatted CD-RW disk already inserted) and it saved with no problem. I like the Nero InCD module running in the background, and always have a formatted CD-RW in my drive. It takes the place of a floppy drive, but can store about 700 MB of data.
