Remote desktop --- Just another example of a third party product that Microsoft wants to takeover and dominate. ReachOut and PC AnyWhere are just two of the many Remote Control software.

| Keep in mind that some of the more advanced features allowed by Pro also
| requires an advanced knowledge of the operating system. Playing with
| functions such as EFS can get you into trouble (file loss) if you don't know
| how to use it. This becomes critical when dealing with company files. The
| bottom line is you can't go wrong with purchasing the Pro edition, but many
| of the extra features would probably not be used in this case. I do find it
| very helpful to be able to use remote desktop which is a pro feature.

| Thanks,

| John
