Windows XP Pro, 2.6 GHz processor, 1 Gig memory, 4 hard drives (2 on IDE, 2 on MB RAID), 2 CD/DVD Drives on IDE.

I started getting "General Protection Faule Error, please delete file." during Windows start-up. Everything runs fine, but the question is what file to delete?

The placard that appears has the yellow triangle with the ! mark in the triangle, and the blue title bar says "Windows Error"

Any information would be appreciated.

Don
