I'm looking for dual-display (no driver-span) aware screensavers here. The built-in screensavers of WinXP handle more than one display very well but not very impressive.

Does anybody know further screensavers for this purpose?

Thanks in advance because it seems to be hard to get some (Google provides too much garbage).

This are the most impressive screensavers I've ever seen:

<http://www.reallyslick.com/>

But unfortunately they only work on the primary display. Perhaps we can beg some little dual-display enhancements of the author? ;)

I found Flurry also, but it won't work on a dual-display configuration if the right one is the primary display (because the left has negative coordinates), so the saver only uses the right display. :(
