I'm so frustrated! I run the powerpoint on Sunday mornings for my church.. 1st service is already in process, with two more services to go... and I have never had this problem before! I am not certain how the camera or projector is connected to the computer... so I'm not sure what Im looking for. Is there some configuration that I should check? I cant project the powerpoint to the screens. Power point is working fine... I have two monitors and they are working fine. The only thing that isn't working is the connection (it seems)

between the computer and the projetors. I am running XP... the server is working fine... everything else is checking out ok. All of the connectors to the back of computer seem ok... the cameras (or projectors) are on, and I have checked all of the inputs... but all that comes up is blue screen. Does anyone have any ideas?
