Hello Andre:

You can copy the gpedit program to your home edition. Do this:

To use the Group Policy editor on XP Home, you need a licensed copy of XP Professional.

Copy the files gpedit.dll, gpedit.msc, and fde.dll from
\WINDOWS\System32 on the
XP Pro machine to \WINDOWS\System32 on the XP Home machine.

>From a command prompt issue the following commands on the XP Home machine:

```
regsvr32 C:\WINDOWS\System32\gpedit.dll
```

```
regsvr32 C:\WINDOWS\System32\fde.dll
```

microsoft.public.windowsxp.general: Re: SP2 "digital signature" nags

Open the Microsoft Management Console (mmc.exe) and select File->Add/Remove Snap-in... Then click Add. Select the Group Policy snap-in from the list of installed snap ins.

You can now edit the Group Policy on the local machine. But XP Home doesn't support the same feature set as XP Pro, so the policies you are looking for might be missing.

The last part of the above procedure is important to note as not all policies are supported in the Home Edition of XP. But you can certainly try – nothing to lose but some time.

Regards.
