Thank you S. Sengupta. The information on your link was very informative, easy to follow and helpful.

I used the Wild Tangent uninstall download and it was successful. I couldn't find the variable file you talked about, but the error message has now gone and I think that is ok?

I did have Spybot Search and Destroy, I deleted the file from its "Recovery" also. However, I never ran it in safe mode before. I have done so and it picked up and cleared another file.

Thank you again for all your help.
