| Bert,
| Housecall ran clean. Isn't this considered to be a good online virus
| scan?

| Ad-Aware found the the files I mentioned earlier are from vendor VX2,
| but it could not remove them either.

| Spybot found CoolWWWSearch but could not remove that either. I ran
| the SmartKiller MiniRemoval tool but it reported that "v1/v2 has not
| been found on your system."
