Hello,

I talked about domain policies and the computer is in that domain. When I have a look on the resultant set of policies I can see that the policies not to synchronize are set.

This morning I have deletet all policy settings in the registry:

HKLM\Software\Policy  
HKLM\Software\Microsoft\Windows\CurrentVersion\Policy  
HKCU\Software\Policy  
HKCU\Software\Microsoft\Windows\CurrentVersion\Policy

After that I have startet gpupdate /force and restartet my computer. After logon the computer startet with synchronisation again :-(

Here are my policy settings from the RSoP (in german):

Alle Offlinedateien beim Anmelden synchronisieren => Deaktiviert  
Alle Offlinedateien vor der Abmeldung synchronisieren => Deaktiviert

What can I do to solve the problem?

Ulli
