I am using Windows XP SP2. My hard disks contains 3 logical drives (NTFS). A few days ago, without any apparent reason, upon boot-up the system checks each time the same logical drive , with a message : "Checking file system on disk E:...

One of the disks has to be checked for consistency ..."

This happens every time upon boot-up. It seems that such a check was somehow scheduled, but I do not know how to remove it.

Any help will be greatly appreciated.
