Hi Mike,

Remove the context menu addition: It depends on where in the right click menu.

Go to Start/Run/Regedit and navigate to:

```
HKEY_CLASSES_ROOT*\OpenWithList
HKEY_CLASSES_ROOT*\shellex\ContextMenuHandlers
HKEY_CLASSES_ROOT\Directory\Background
HKEY_CLASSES_ROOT\Directory\shell
HKEY_CLASSES_ROOT\Directory\shellex\ContextMenuHandlers
HKEY_CLASSES_ROOT\Drive\shell
HKEY_CLASSES_ROOT\Drive\shellex\ContextMenuHandlers
HKEY_CLASSES_ROOT\Folder\shell
HKEY_CLASSES_ROOT\Folder\shellex\ContextMenuHandlers
```

Customizing Right-Click Menu Options in Windows

[http://www.jfitz.com/tips/rclick\\_custom.html](http://www.jfitz.com/tips/rclick_custom.html)

As for the two .cpl's do a search for: \*.cpl  
When it appears, right click, delete. Or list them here:

This tweak is useful for uncluttering your Control Panel and removing unused functions: Start/Run/Regedit

HKEY\_CURRENT\_USER\Control Panel\don't load

Add a key named don't load. Next add String values within the don't load Key. You will use one String value for each control panel applet you want removed. For example, I want to remove the "System" applet once I configure my Paging File to Performance settings as well as Restore functions and more – I will make a string value with the name "sysdm.cpl" and no value set and the System applet will no longer be available under the Control Panel. To restore a full control Panel to default just delete the "don't load" key.

Here are the Windows XP Pro Control Panel applets:

Re: Trying to block Intel GMA driver on the desktop.

Re: Trying to block Intel GMA driver on the desktop.

System Properties = sysdm.cpl  
Network Connections = ncpa.cpl  
ODBC Administrator = odbccp32.cpl  
Display Properties = desk.cpl  
Add or remove programs = appwiz.cpl  
Internet Properties = Inetcpl.cpl  
Game Controllers = joy.cpl  
Phone and modem Options = telephon.cpl  
Time and Date Properties = timedate.cpl  
Region and Language Options = intl.cpl  
Power Options = powercfg.cpl  
Mouse Properties = main.cpl  
Accessibility Options = access.cpl  
Add Hardware Wizard = hdwwiz.cpl  
Sound and Audio Devices = mmsys.cpl  
User Accounts = nusrmgr.cpl  
Speech Properties = sapi.cpl

<news:%23LVFxK8PFHA.1172@xxxxxxxxxxxxxxxxxxxxxxxxxxxx>  
I recent set up a Dell Optiplex GX280 with a Intel 82915G Video driver but I need to gray out the Graphics properties options when I right click. I set up 5 of these machines with a group policy but a user was able to change the rotation of the screen 180 degrees. Is there any way I can gray out the graphics properties option with a registry key or group policy? I know I can just take out the right click functionality completely with group policy but I'd like to keep this option open. The name of the .cpl extension is igfxcp.cpl and I tried hiding the applet but that doesn't prevent access to it. I'd also like to hide the Printers & Faxes applet but I can't find that when I do a search.
