Hi,

You need to give limited user accounts full control on the ICQ program folder. This is very common with chat programs and limited accounts. A quick way to do this would be to open a command prompt (start/run cmd) and run the following to give everyone full control:

```
cacls file_path /g users:f
```

"file\_path" needs to be the path to the ICQ program folder, eg:

```
C:\Program files\ICQ
```

Otherwise, you will need to logon as administrator and manually change the permissions. See more on this here: <http://rickrogers.org/xpsware.htm>
