Are you using McAfee by chance? It has a conflict with IE6.
If you have then open VirusScan 6 from the system tray (bottom right corner), on the lower left of the window choose "pick a task".
Next choose "change my virus scan settings".
Then "configure V-shield background scanning".
At the bottom "customize your V-shield settings" now on the left of the window choose "internet filter".
Now under applet filters, uncheck the entry "active X controls" hit apply and close. Your history will now work as normal.

regards,
ssg MS-MVP
