I did like you said, and the message I got said "The parameter is not valid." What to do now??

"S.Sengupta" wrote:

Boot with the XP CD.
you will be prompted to Install or Repair, choose Repair.
Enter into the Recovery Console.Follow the prompts.When you get to the

C: or C:\Windows prompt, enter the following command:

```
EXPAND -R X:\I386\NTOSKRNL.EX_ C:\Windows\System32
```

This will extract a copy from the installation CD.

When "trying" to start my laptop, I get the following message... "Windows cannot start because the following file is missing or corrupt: <windows root>\system32\ntoskrnl.exe... Please re-install a copy of the above file". Can someone please direct me in the right direction to correct this problem? Your help will be greatly appreciated. Thanks.
