hi i cant get a monitor to install on pc winxp it said vga  
not  
compatible i dont have disc know that xp has this driver  
but i read  
that i have to trick it into using it this i got from  
internet dont  
understand it it is a tft monitor proview i have been to the  
sight  
but cant find which driver it is help [The OP's post,  
corrected and interpreted version below, with my answer.]

Hi, I have a problem with my new TFT Proview monitor. I am  
using Win XP and get the error message "VGA not compatible."  
I don't have an XP disk, but know (some possible confusion  
here, it could be that she knows or may be she meant to say  
the now she doesn't have the XP disk) but am looking for a  
driver to make it compatible. I tried going to the Proview  
site [words get so difficult, cite means to quote or  
otherwise refer to another, site means a place and sight  
means to see or aim] but don't find what I'm need. Do I  
need a driver? Do I have to "trick" the system into using a  
new driver or what?

My answer, if you saw the error message the monitor and  
computer are connected and working. Did Windows boot  
normally or did the BIOS return the error message?  
My guess is that your graphics card is set to a mode that is  
not supported by the new TFT monitor. You need to set the  
resolution and refresh rate to match the TFT native  
settings.

PROVIEW 15 TFT FLAT PANEL MONITOR – Computing and Gaming –  
Buy and ... Manufacturer: PROVIEW Model: EM 150 15 Flat  
Panel TFT Monitor, 0.297 mm Dot Pitch, 1024 X 768 Maximum  
Monitor Resolution, Plug & Play, Stylish Silver Design ...
