Nothing to worry about. I get Event ID 529 & 680 all the time.

[[The event occurred on Windows XP if the machine environment meets the following criteria:

- The machine is a member of a domain.
- The machine is using a machine local account.
- Logon failure auditing is enabled.

When the user logs off, Windows will write event ID 529 to the log file because the OS incorrectly tries to contact the domain controller (DC), despite the fact that the machine is using a local account. Microsoft currently doesn't provide a fix for this problem, but you can safely ignore this event ID.]]

Event Type: Failure Audit
Event Source: Security
Event Category: Logon/Logoff
Event ID: 529
Date: 12/27/2003
Time: 7:49:48 AM
User: NT AUTHORITY\SYSTEM
Computer: MYPENTIUM450
Description:
Logon Failure:
Reason: Unknown user name or bad password

Security Event 529 Is Logged for Local User Accounts
<http://support.microsoft.com/?kbid=811082>

Failure Events Are Logged When the Welcome Screen Is Enabled
<http://support.microsoft.com/?kbid=305822>

Event Type: Failure Audit
Event Source: Security
Event Category: Account Logon
Event ID: 680
Date: 12/27/2003
Time: 7:49:48 AM
User: NT AUTHORITY\SYSTEM

Re: Event viewer and security failure audit

Computer: MYPENTIUM450

Description:

Logon attempt by: MICROSOFT_AUTHENTICATION_PACKAGE_V1_0

Explanation

A program or service attempted to start with the logon credentials specified in the message, which do not match the credentials of the current user. This message is logged for informational purposes only.

User Action

No user action is required.

Failure Events Are Logged When the Welcome Screen Is Enabled
