A few Security Updates I apply I'm not that silly. But most I saty away from and use behavior modification instead. When I talk to Microsoft on the phone it is one of the most enjoyable experiences I have with Software companies. There seems to be a disconnect between engineers who help ME and the enmengineers who release this crap oon the public. I understand some people cannot d/l a file that size. Granted. But just because they can get something which helps them to avoid that in no way excuses the engineers from doing their jobs correctly.

Gripe gripe gripe where's it going to get me? Nada. The company is too big anymore to understand the power of reason. It is they who have resulted in this Internet fiasco. And they know it. Read the headlines today?
