Run the latest versions of Spybot, Search and Destroy, CWShredder, Adaware in safe mode.  
start searching by typing the name of the malware and if you find any just delete it.

Also look at the following registry points:-

```
Start>Run>Regedit>ok
now navigate to the following keys:-
HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\Run
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Run
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Shared Tools\MSConfig\startupreg
```

Expand all the keys by simply clicking (+) signs.

Now look at the right pane and delete any string having the above mentioned file.

Now close the registry editor.

regards,

this is an application that suddenly showed up

## Re: What is SWRTG?

i ran adaware, spybot, and nortons av and deleted it

but it still re-appears

what is it?  
how do i get rid of it

it is 80 kb

its icon is a green plus sign

thanks
