The volume icon no longer appears on my taskbar for some reason. I have to go to control panel to adjust my speaker volume. This is very inconvenient. When I select sounds and audio devices properties within the control panel I see that 'Place Volume Icon in the Taskbar' is selected. How do I restore the volume control function to the taskbar?

As a related question, I have an icon on the taskbar for a wireless mouse and keyboard, which I uninstalled and threw away because the mouse was so jittery. How do I get rid of this annoying and useless taskbar icon?
