I had a Blue Screen Memory Dump and from that point on, I can't boot up with F8, or Safe made. The following is my event log, so can anyone help me out with this? I also lost a 512MB DIMM RAM memory chip that does not even show it is installed or working! Any clues?

Event Type: Information
Event Source: Save Dump
Event Category: None
Event ID: 1001
Date: 7/17/2005
Time: 5:39:19 PM
User: N/A
Computer: WIZ1

Description:

The computer has rebooted from a bugcheck. The bugcheck was: 0x000000f4 (0x00000003, 0x865b8bb0, 0x865b8d24, 0x805f9f88). A dump was saved in: C:\WINDOWS\Minidump\Mini071705-02.dmp.

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.
