What do you suspect? I think that the issue is at Microsoft or perhaps the college which is my ISP. My computer is running Ad-Aware SE Personal and SpyBot S&D as well as SpywareBlaster. I also have run McAfee AV and AVAST AV. The MS MSAS page says that the new build is 615, but the link on that page returns the 614 file. I have tried running the validation and just for kicks even tried it w/o the validation. I have also used Mozilla to download the file. I've run disk cleanup, deleted all Temp files, uninstalled MSAS and deleted it's folder.

BTW, my mother maiden name was McAnulty.
