I was fiddling with my usb flash drive in disk management and i accidentaly deleted my data partition! I thought i was deleting a badly marked flash drive sector! All my data was on it, i have no backups!

Please tell me there's an easy way to rectify this! Please! The disk wasn't working it didn't sound like data was being deleted please tell me it's just somehow marked as not there or something! How can i get it back?!
