

I am getting strange error pop ups.

I am getting strange error pop ups.

-

Because of a virus I had to restore my system, but since then I keep getting these pop up windows with "Message Error" or "Messenger Service" on the top and advising of various errors or registry corruption and they give me a link to go and download the fix. They do not look like the Windows applets. How do I find out if they are legit or bogus?

Many thanks,

moushia
