Hi,

in my computer i had running two two OS C: Windows 2000 and D: Windows XP. And due to some bad sector in C partition my C partition was dead. So now when i boot my XP SP2 it takes very long to boot and was very slow. So i decided to buy new hard drive and installed new hard drive as Master Windows Xp Pro SP2. Now my new hard drive works fine. But now when i try to boot through my old hard drive's Xp it gives me this error message saying "NTLDR is missing please press any key to continue" I don't know what is wrong, what to do.

Pls help

Regards

.
