I never said I was happy or not happy for the record .  
I can't see kurtrail post. He told me something I didn't like to  
hear.

Re: xp reactivation after mobo change

It possible one peace of software causing that problem or some tweak I did or an the repair changed my CPU without my permission.

It is a problem with explorer.exe shell32.dll and shlwapi.dll

This does it even with xp sp1 and no updates installed.

Maybe ie 7 will fix this problem.

What I don't like about xp.

Is the activation and Wga things.

It won't run some of my older programs.

(I am not the type of person who goes out any buys the newest software with each operating system)

I don't like the high picth noise my computer makes—yes this is after I cleaned out the fan and the heat sinks.

I like 98se a lot better myself.

I do like somethings about xp and somethings I don't.

Greg R
