Hi Kathryn

Try pasting these 2 lines into notepad (between the stars) and save the file with a .vbs extension

```
!*****  
set a = createobject("ShockwaveFlash.ShockwaveFlash")  
msgbox "ok"  
!*****
```

Click on the newly created file, and see if it pops up an ok message, or you get an error message about not being able to create an object

Hi Jon

Yes, these were already enabled in both Trusted Sites and Internet. Still comes up with No Flash error.

--

Thanks for taking the time to read my thread, I look forward to reading your response.

Kathryn

Ensure these are all set to "enable"

Tools > Internet Options > Security (tab) > [Click on "Trusted Sites"] >
Custom Level

(and / or
Tools > Internet Options > Security (tab) > [Click
on "Internet"] > Custom
Level)

Under "ActiveX Controls and plug-ins".....
Initialize and Script ActiveX controls marked as safe for scripting
Run Activex controls and plug-ins

Under "Scripting".....
Active Scripting
