hi
over the last few days, for some reason when right clicking a
file in windows explorer i get the error:

```
explorer.exe - Application Error
The instruction at "0x04733397" referenced memory at
"0x00000000". The memory could not be 'written.
Click on OK to terminate the program
(also get the 'debug' option sometimes)
```

When i click ok, the desktop will refresh and i can continue.
done the usual av/spyware scans and nothing has shown up.

I would really appreciate any ideas on how to resolve this please

Many thanks
Steve

try running a ram test

.
