understood ... but ... the changes seem to happen either on closedown or  
on startup at which time filemon won't be running. Unless you can tell  
me how I can have filemon running at those times – I can obviously keep  
filemon running as I close down but of course it will get stiopped at  
some point and its log gets lost if I haven't savwed it (v large log to  
say the least!!).
