Although I have used computers for 15+ years I am not the technical sort. I have been looking for the easiest way to do backups and not happy with anything I have found. Bought Acronis and simply couldn't figure out how to use it (anybody want it?).

Then I tried a Western Digital combo unit with the thought I could just copy my entire hd to it—but it's not at all simple (for me) and the directions were over my head.

My goal is disaster recovery. I have a work computer (older model 18 gig pc) and a newer Toshiba Satellite use for home stuff.

I would truly appreciate any and all suggestions for the simplest way to do it. Money is—within reason of course—not an issue.

Thanks very much.

Alan
