| can windows XP Pro support hardware raid 1 ?

|

| i found few article of how to hack windows system files and make windows XP

| support software raid,

| but i don't like that kind of ideas, i'm planning to buy a normal server

| with hardware raid,

| will windows XP Pro able to support it ?

|

It will support any RAID that is done in hardware. Hardware RAID controllers are the *best* way to go because the OS sees one virtual hard disk not an array of hard disks.
