That version comes with XP Pro and maybe others (I have sp2). Looks like the same one in W2003 too.

For the sake of speed you can find a copy here, as far as I know this whole system is clean, please let me know when you have it so I can remove it from the site again.

<http://www.charlietame.org/speech.dll>

Probably need to copy to the spedech directory and the dllcache in safe mode else XP will keep replacing it :)
