Really weird because I have an Apex DVD player too since its relatively cheap and can play almost anything I throw at it (might be older model, not sure). The video_TS folder thing is correct so you shouldn't really have to mess with that for now. The Audio_TS folder is usually empty so don't be surprised at that. At least you got it to play on another DVD player, so that means at least your DVD burner works it burned correctly. I think it might be the Rewritable DVDs that is causing the problem in the Apex. I can't be 100% sure because I have never used DVD-RWs before and I only use DVD+Rs. Therefore, it could mean that the Apex DVD player couldn't handle the RW discs. Get some +Rs and -Rs and see if they do the trick if you really must play it back on the Apex. Good luck.
