Yep. Me, too.

I don't use Norton for firewall or for AV. I use Norton because in my 20 + years, I have YET to encounter a better hard drive manager. If it's properly installed, for all the comments I've seen, you can't beat Norton for finding and fixing a HOST of hard drive issues.

And I didn't pay for mine. I found a copy of Norton SystemWorks 2003.

And that's what I continue to use.

I've heard complaints about 2004 AND 2005.

My son was complaining about all the issues that he's heard relating to 2004 and 2005.

I said, "That's why I gave you 200_3_."

It's one of the very few suggestions I've made that he's used and liked. (he's a budding computer engineer).
