Hall wrote:

My XP Pro system has 2 user accounts. One is admin, with admin settings, the other is restricted, without admin settings. The restricted one can't install software.

Some software seem to only work for the user account if installed by that account. So to make such a software available for the restricted account, I need to switch it to an admin type. So I tried that while logged in as the admin id. But when I switch back to the other id, I still get the message that I don't have admin privileges.

Is there anything else I need to do to turn a restricted account to an admin account?

Thx

You may experience some problems if the software was designed for Win9x/Me, or if it was intended for WinNT/2K/XP, but was improperly designed. Quite simply, the application doesn't "know" how to handle individual user profiles with differing security permissions levels, or the application is designed to make to make changes to "off-limits" sections of the Windows registry or protected Windows system folders.

For example, saved data are often stored in a sub-folder under the application's folder within C:\Program Files – a place where no inexperienced or limited user should ever have write permissions.

It may even be that the software requires "write" access to parts of the registry or protected systems folders/files that are not normally accessible to regular users. (This *won't* occur if the application is properly written.) If this does prove to be the case, however, you're often left with three options: Either grant the necessary users appropriate higher access privileges (either as Power Users or local administrators), explicitly grant normal users elevated privileges to the affected folders and/or part(s) or the registry, or replace the application with one that was properly designed specifically for WinNT/2K/XP.

Some Programs Do Not Work If You Log On from Limited Account

Re: Can't make restricted account an admin account

Additionally, here are a couple of tips suggested, in a reply to a different post, by MS-MVP Kent W. England:

"If your game or application works with admin accounts, but not with limited accounts, you can fix it to allow limited users to access the program files folder with "change" capability rather than "read" which is the default.

```
C:\>cacls "Program Files\appfolder" /e /t /p users:c
```

where "appfolder" is the folder where the application is installed.

If you wish to undo these changes, then run

```
C:\>cacls "Program Files\appfolder" /e /t /p users:r
```

If you still have a problem with running the program or saving settings on limited accounts, you may need to change permissions on the registry keys. Run regedit.exe and go to HKLM\Software\vendor\app, where "vendor\app" is the key that the software vendor used for your specific program. Change the permissions on this key to allow Users full control."
