Thanks for the info. I'll try that as soon as possible.
Is there another way to access Safe Mode, F8 does n't work on my computer?
Could you explain "Use the "Reply to Sender" feature of your news reader program to email me."?
I do not understand.

That only works if you are using a newsreader like Outlook Express, Netscape or Thunderbird. You are using MS's web interface and I guess it won't work with that.

If F8 doesn't work, I don't know what to tell you. Are you hitting the F8 right after the beep when rebooting?

I am trying to help someone who has unwittingly downloaded a trial version of Registry Pro. and wants it removed.

There is no listing for the program, even in Add/Remove.

I have deleted every item I can find in the registry referring to this prog. except one.
This will not allow itself to be deleted

Any ideas

Did you try deleting it in Safe Mode?
