Hi Malke,

I've managed to recover almost all the photos (probably 99%).  
When I used PC Recovery I thought that it recovered some folders but it didn't.  
It also locked the notebook and it restarted, calling checkdisk again.  
Probably checkdisk found the lost folders of my photos and converted all files to .CHK files.  
I used a software called unchk and it recovered the files.  
I'm going to backup the files today and after that I will try the Seagate tools.  
Tell u more when I finish.  
Thanks very very very much for your help.

[ ]s, Ramon
